

## **New generation of electric motors from Audi Hungaria: Pre-series production of MEBeco. Focus on machines and production capabilities**

Győr, 09. December 2025 – At Audi Hungaria's engine plant, preparations are in full swing for the series production of the new generation of MEBeco electric drives. With the pre-series production, the project has reached another milestone, confirming the key role of the Győr-based company in the Volkswagen Group's electromobility strategy.

Audi Hungaria is actively shaping the future of electromobility. With innovative technologies, a broad portfolio and high flexibility, we ensure our competitiveness. Our greatest strength remains the expertise and commitment of our employees," says Michael Breme, Chairman of the Board of Audi Hungaria.

The MEBeco project has entered its final phase: the preparation of production lines and equipment for series production is in full swing at the Audi Hungaria engine plant. During the transition phase between pilot and series production, final machine takeovers and production capability tests are continuously carried out to ensure that all equipment meets the highest quality standards.

Audi Hungaria not only assembles MEBeco electric drives at the Győr engine plant, but is also significantly increasing its production depth. Building on its expertise in stator and transmission production, the company will in future also manufacture rotors, plate packs and power electronics on its own site, covering an area of 33,000 m<sup>2</sup>.

The project requires close cooperation between several disciplines – manufacturing, factory design, quality assurance, logistics, project management, technical development, tool design. Series production of the new electric drives is expected to start in the first half of next year.

"Audi Hungaria is one of the key players in the future of mobility. With MEBeco, we have successfully achieved an unprecedented level of manufacturing depth in electric drive production. Our professional team ensures the highest quality of our innovative product and contributes expertly to the further development of electromobility." - says Peter Will, Board of Management of Audi Hungaria responsible for Powertrain Production.

Audi Hungaria is Hungary's leading automotive company, with 32 years of experience in engine and powertrain manufacturing and 27 years of experience in vehicle production. The Győr-based company is an important pillar of the Volkswagen Group's international production and development network, and is uniquely engaged in R&D activities among automotive companies in Hungary. It adapts its product portfolio flexibly to meet customer needs, and from next year will add a new generation of electric motors to its range. Audi Hungaria is a responsible employer of more than 11,000 employees and the largest foreign investor in Hungary, with more than €12 billion invested.

Based in Győr, AUDI HUNGARIA Zrt. is a member of the Audi Group and is the main powertrain supplier of the Audi and Volkswagen Groups. The company manufactures close to 1.7 million powertrains each year, including electric drives. The Audi Q3 and the Audi Q3 Sportback models (which are also manufactured with electric drivetrains) are manufactured in Győr. Audi Hungaria supplies a large number of aluminum body parts for various brands of the Volkswagen Group, and also performs increasingly large-scale development activities (vehicle drive and vehicle development). The company provides a wide range of services for the entire Volkswagen Group, primarily in the areas of IT, procurement, finance and technical development. Audi Hungaria is among the companies with the highest turnover, one of the largest exporters in Hungary and the biggest investor in the Hungarian automotive industry. Audi Hungaria has been balance sheet carbon neutral since 2020 and is the largest employer in the region.
